CERAKOTE

PROFESSIONAL CERAMIC COATING

- Long Lasting & Easy to Apply
- Keeps Wheels Cleaner Longer
- Safe for all Surfaces: Powder, Paint & Glass

V12012022

IMPORTANT

READ ALL INSTRUCTIONS
BEFORE STARTING

PREPARING THE SURFACE

- Park the vehicle in the shade or out of the sun.
- Wash surface thoroughly using a high-quality carwash soap of your preference.
- Thoroughly dry wheels and ensure all surfaces are cool to the touch before application.

APPLICATION

Note:

- *Complete the following steps on each wheel of the vehicle before moving on to the next. This will ensure you have adequate time to achieve incredible results.*
- Gently shake bottle for approximately 10 seconds.
- Evenly spray a light coat directly to the surface. Using one side of the towel, wipe the coating evenly across the surface.
- Immediately flip the towel to a clean dry side and buff the coating to an incredible shine. Inspect each section after buffing to ensure no haze remains. If any haze is present, buff the haze away to a high gloss shine.
- Prismatic Powders Powder Coat & Wheel Protectant will cure for approximately 2 hours. During this time, you will notice the gloss level and slickness increase dramatically.
- **IMPORTANT!** Do not expose to moisture during the 2-hour cure.

TIPS & FAQ's

- Can I reapply? Yes, multiple layers will improve performance attributes. Prismatic Powders Powder Coat & Wheel Protectant can be reapplied at any time to a clean dry surface.
- I missed a spot and can see haze: If the coating has cured for more than two hours, simply reapply the Rapid Ceramic to the hazy area and buff to a shine.
